

BMG ENGINEERING TECHNICAL SERVICES

WHO WE ARE

BMG Engineering Technical Services is a leading Engineering, technical and Maintenance Company serving customers throughout United Arab Emirates.

Our strengths are built on our strategic partnerships, regional knowledge, expertise and customer understanding. BMG always provides value and never compromises on quality and efficiency. The company consistently promotes world-class products, services and solutions that meet our customers' needs through a highly competitive price.

BMG believes in best practices & commit ourselves to the highest quality, health, safety & environmental standards.

OUR VISION

To be the UAE's best technical services provider delivering reliable and responsive services with cent percent customer satisfaction

OUR TEAM

Our team of experienced, skilled and professionals offers a wide range of services to help and provide complete solutions for all your property requirements. We always aim to keep our customers happy and safe in their homes. Quick to respond, reliable and efficient!

WHAT WE DO

BMG Engineering Technical Services provides a comprehensive range of maintenance and repair services to customers throughout UAE.

These technical services include the following:

All Types of MEP Works

Civil Works

Air Conditioning (A/C) Works

Interior Fit Out

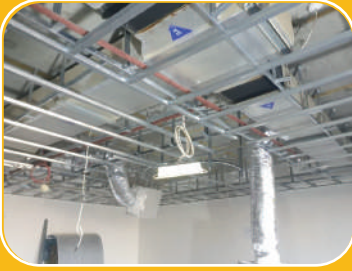

MEP WORKS:

There are several elements of construction that are considered vitally important in ensuring that finished buildings function as they are intended to. Sometimes referred to as MEP design, the three elements that compose this backbone of engineering include mechanical, electrical, and plumbing. Together, they create a harmonious design that makes projects large and small work.

Here's more about the importance of each – and why you should only trust these jobs to a professional.

Some of our Completed Project Works....

OST CONTRACTING PROJECT :
MEP WORKS

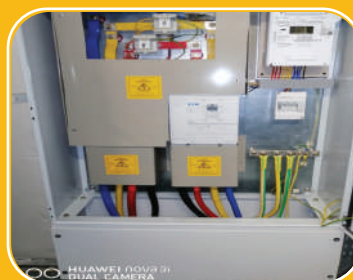

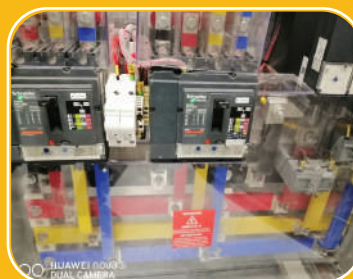

MOCA GROUP HVAC PROJECT :

ADIL MOHAMED RASHID PROJECT :
Ac Outdoor Unit Installation

ADIL MOHAMED RASHID PROJECT :
Interior Fit Out

Client Name : Realnet Trading, Location : jabel Ali Ind
Project : G+M Warehouse, MEP WORKS

Mechanical Construction

Mechanical services are the skeleton of any structure. This is the basic “building” part of construction that holds everything else up and together. Stone, steel, and other construction elements bring buildings to life beneath the electrical and plumbing work and support the mechanical piping responsible for delivering these utilities to residents or consumers.

Electrical Engineering

Electrical work is vitally important to today’s buildings. Whether you are building a residential structure, a commercial property, or something else entirely, odds are it will require working electricity.

Solid electrical design doesn’t just keep the lights on. It is also responsible for making HVAC work and ensuring that any electricity-powered devices in the business or home are functional as well.

Plumbing Integration

Where would we be without plumbing? Whether you’re at home enjoying a bath or need to use a restroom in public, there are so many reasons why functional plumbing is important. More than just comfort and convenience, working plumbing is a health and safety insurance policy. It helps people stay clean, hydrated, and healthy – as well as cook for and clean up after themselves or consumers.

The professionals responsible for bringing together these three important disciplines are referred to as mechanical engineers. They help plumbers, electricians, and construction professionals work together to create finished buildings that are beautiful, functional, and comfortable. From heating and cooling to plumbing and electrical work, they help plan and implement the inner workings of successful buildings, both commercial and residential.

Before you begin your next construction project, consider consulting one of these multi-discipline professionals. They can guide you in creating the perfect plan for your project, regardless of size and scope. They can also help you ensure that no matter what you’re building, it works properly once finished.

CIVIL WORKS:

We are experienced, having a proven track record in a large variety of civil construction all aspects of Residential, Commercial and Industrial development. We plan the schedule, organize the resources, execute and control budget and work flow, manage a safety program and ensure quality and timely delivery of the works.

- Constructing Multistoried Buildings
- Industrial Buildings
- Independent Villas
- Precast column
- Foundation works
- Back filling Excavation
- Construction of manholes
- Building construction
- Soil nailing / ground improvement
- Heavy structures
- Concrete and asphalt paving

AIR CONDITIONING (AC)

Our qualified AC technicians are fully trained to deal with all your AC maintenance, repair and installation requirements.

Air conditioning systems help to keep the inside of homes and buildings at a cool temperature, whilst filtering dust from the circulated air to ensure clean air is passed into the serviced area. This is important from a health and safety perspective, as it helps humans to breathe clean air in a cool environment.

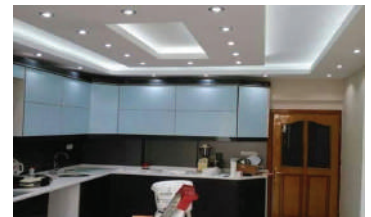

Our comprehensive AC services cover the following areas:

- Split Air Conditioning
- Chilled Water (District Cooling)
- AC Cleaning
- AC Installation
- Duct Cleaning
- Filter Cleaning
- Vent Cleaning
- Compressors
- Evaporator Trays
- HVAC systems
- In-room Air Vents
- Capacitors
- Filter Dryers

INTERIOR FIT OUT SERVICES

A common requirement in residential, commercial and retail places is the installation of partitions and false ceilings. Our team will assist and guide you with suitable solutions when it comes to installing wall partitions and false ceilings. We can also help to repair damaged areas and remove old partitions and ceilings.

False ceilings, also referred to as dropped ceilings, are secondary ceilings below the main ceiling. They are used for aesthetic purposes to make a room look more visually attractive by hiding infrastructure such as pipes, cables, wires and ductwork. Acoustics and sounds in a room can be vastly improved by using a false ceiling, as this helps to create a soundproofing effect. Energy efficiency is often improved through false ceilings, as it helps to create an insulating effect for cooling and heating.

Our partition and false ceiling services include the following:

- Partition Installation
- Brick Partitions
- False Ceiling Installation
- Partition Removal
- Glass Partitions
- False Ceiling Removal
- Gypsum Walls
- Sliding Partitions
- Soundproofing
- Energy Efficiency Improvement
